LITHIUM Thionyl Chloride

Primary Cells

by DYNAMIS

Long term power supply security for wireless applications.

Typical cases for long term presence of energy for small loads or current absence at electronic applications are scope for the use of our Lithium primary cells in huge amount.

The Lithium primary cells are available in large quantities for electronic applications requiring long-term power supply with low energy loads or no current requirements.

- Primary cells are reliable and low-cost solution for a wide range of category groups.
- In size from the classic ½ AA size (14250) up to the DD (341270).
- Nearly 25 variants are available with a temperature range of up to +85°C for general purpose applications or as high temperature cells, useable in temperatures as high as +150°C.
- The high power cells are also available in most sizes, designed for discharge currents 4-5 times that of standard value.
- Available with a choice of terminations (i.e. T, P, PT, PTV or ERP).

Customized compositions of this product range can be designed and produced in our facilities in Germany.
